DETAILED ACTION

Claims 1-12 are pending.

Applicants have elected Group I of the restriction claims 1-7 and 13 wherein Ar1 and Ar 2 are phenyls, R3 is a H.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-7 and 13 rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for some substitutents such as R1 to be –C=OCH3, alkyl, halogens, R2 to be and alkyl or NR5R6, R5, R6 to be H, alkyl, CO2Rc and some other variable as given by the examples in the table, R4 to be an alkyl or an alkyl aryl, does not reasonably provide enablement for all the various substitutents such as the heteroaryl, cycloheteroalkyl, cycloalkyl and so on.. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims.

In re Wands, 858 F.2d 731, 737, 8 USPQ2d 1400, 1404 (Fed. Cir. 1988).

There are many factors to be considered when determining whether there is sufficient evidence to support a determination that a disclosure does not satisfy the enablement requirement and whether any necessary experimentation is "undue". These factors include 1) the breadth of the claims, 2) the nature of the invention, 3) the state of the prior art, 4) the level of one of ordinary skill, 5) the level of predictability in the art, 6) the amount of direction provided by the inventor, 7) the existence of working examples, and 8) the quantity of experimentation needed to make or use the invention based on the content of the disclosure. In re Wands, 858 F.2d 731, 737, 8 USPO2d 1400, 1404 (Fed. Cir. 1988).

Application/Control Number: 10/576,796 Page 3

Art Unit: 1625

1) The breadth of the claims: The instant claims encompass many compounds from an aromatic carbocyclic moiety to an aromatic carbocyclic moiety having many large electron withdrawing and bulky groups substituted on it to a moiety having many heterocyclic rings. These compounds cover a very wide range of compounds. The various substitutents go on for pages such as

R1 is selected from:

- (i) halogen,
- (2) C1.6alkyl,
- (3) -CN,
- (4) $\sim C(O)R^7$,
- (5) -OR4,
- (6) -NR5R6, W
- (7) $-S(O)_2 \mathbb{R}^7$,
- (8) cyclosikyl,
- (9) cycloheteroalkyl,
- (10) aryl, and
- (11) heteroaryl,

wherein each alkyl moiety is unsubstituted or substituted with one, two, or three substituents independently selected from \mathbb{R}^3 , and each cyclosikyl, cycloheteroalkyl, anyl and heteroaryl moiety is unsubstituted or substituted with one, two, or three substitutents independently selected from \mathbb{R}^3 ;

RZ is selected from:

- (i) hydrogen,
- (2) -NR3R6,
- $(3) \quad \neg C(O)R^{\gamma},$
- (4) C₁-6alkyl,
- (5) C2.6 alkenyl,
- (6) Cz.galkynyi,
- (?) aryl,

Application/Control Number: 10/576,796

Art Unit: 1625

- (8) srylCq.galkyl-,
- (9) arylC2_6alkeayl-,
- (10) heterosryl,
- (11) heteroarylC1-6alkyl-,
- (12) heterosrylC2-6sikenyl-,
- (13) cyclosikyl,
- (14) cycloheterosikyi-, and
- (15) -ORd.

wherein each alkyl, alkenyl, and alkynyl moisty is unsubstituted or substituted with one, two, or three substituted independently selected from R⁸; and each aryl and beteroaryl moiety is unsubstituted or substituted with one, two, or three substitutents independently selected from R^b; and each cycloalkyl and cycloheteroalkyl moiety is unsubstituted or substituted with one, two, three or four substitutents independently selected from R^b and oxo;

or R³ and R² together form a 4 to 7 membered ring, containing 0, 1, or 2 heteroatoms independently selected from nitrogen, oxygen, and sulfar; assubstituted or substituted on carbon or nitrogen with one, two or three substituents independently selected from R⁵, wherein one or two of the carbon substituents may also be oxo, and wherein the ring is saturated or has one degree of unsaturation;

R3 is selected from:

- hydrogen,
- (2) C₁₋₆alkyi,
- (3) C1.6alkyloxy-,
- (4) triffuoromethyl,
- (5) triffuoromethoxy-,
- (6) halo, and
- (7) C3.7cyeloalkyl,

wherein the alkyl mojety is unsubstituted or substituted with one, two, or three substituteds independently selected from R³, and the cyclosikyl mojety is unsubstituted or substituted with one to three substitutents selected from R⁵ and oxo;

R4 is selected from:

- (i) hydrogen, and
- (2) -CH2-R8;

R5 and R5 are each independently selected from:

- (1) hydrogen,
- (2) C1.10alkyl,
- (3) C2.10 alkenyl,

- (4) C2-10alkynyl,
- (3) aryl,
- (6) arylCquqaikyl-,
- (7) heteroaryl,
- (8) heteroarylCq_qalkyl-.
- (9) cyclosikyi,
- (10) cyclosikylC1.4sikyl-,
- (11) triffuoromethyl,
- (12) -C(O)-RC,
- (13) -CO2Rs,
- (14) -C(O)C(O)ORC,
- (15) -C(O)C(O)NRCRI,
- (16) -S(O)38R¢, and

wiserein each alkyl, alkenyl, alkynyl moiesy is unsubstitused or substituted with one or two Ra substituents, and each cycloalkyl, beteroaryl and aryl molety is unsubstituted or substituted with one or two Rb substituents,

or R5 and R6 together form =CH-N(R#)(Rf);

\mathbb{R}^7 is selected from:

- (i) hydrogen,
- (2) Cj.; galkyl,
- (3) Cz. małkenyi,
- (4) C2-{Oalkynyl,
- (5) cyclosikyl,
- (6) cyclosikyl-C1-19alkyl-,
- (7) cycloheterosikyi,
- (8) cycloheteresikyi-C1.10 alkyl-,
- (9) aryl,
- (10) heteroaryl,
- (ii) aryl-Callgalkyl-,
- (12) heteroaryl-Ci_igalkyl-,
- (13) -ORC,
- (14) -NRGRE,
- (15) ~NH(C=O)OR®, and
- (16) -NR\$SO2RC,

wherein each alkyl, alkenyl, and alkynyl maiety is unsubstituted or substituted with one, two, three or four substitutents independently selected from R^a, and each cycloalkyl, cyclobeteroalkyl, aryl and heteroaryl moiety is unsubstituted or substituted with one, two, three or four substitutents independently selected from R^b;

R8 is selected from:

- (1) hydrogen,
- (2) -(CH2)mOCLORe,
- (3) Cj.galkyl,
- (4) C2.g alkenyl,
- (5) C2.şaikynyi,
- (6) cycloalkyl,
- (7) cycloalkyl-Cj.galkyl-,
- (8) cycloheternalkyl,
- (9) cycloheteroalkyl-Cj_g alkyl-,
- (10) aryl,
- (11) heteresaryl,
- (12) aryl-C1_galkyl-, and
- (13) heteroaryl-C₁-gaikyl-,

wherein each alkyl, alkenyl, and alkynyl moisty is unsubstituted or substituted with one, two, three or four substituents independently selected from R^a, and each cyclosikyl, cycloheteroalkyl, aryl and heteroaryl moiety is unsubstituted or substituted with one, two, three or four substitutents independently selected from R^b;

Ar1 and Ar2 are independently selected from:

- (§) aryl,
- (2) heteroaryl,

wherein each aryl and heteroaryl moiety is unsubstituted or substituted with one, two, three or four substituents independently selected from Rb;

each R® is independently selected from:

- (1) -ORC.
- (2) NRdS(O)mRc,
- $(3) = NO_{2a}$
- (4) halogen,
- $(5) \quad \text{-S}(O)_{89} \mathbb{R}^{p},$
- (6) -SR#,
- (7) -\$(0)2ORe,
- (8) -S(O)mNReRf.

and on

and on. Claim 1 goes on for 10 pages.

- **2) The nature of the invention:** The invention is a (highly) substituted compound that is useful to treat a disease mediated by cannabinoid receptors.
- 3) The state of the prior art:.

The state of the prior art is that the drugs and the enzymes react in a lock and key mechanism and the structure of the compound has to be specific. Even a difference of a methyl group verses a hydrogen changes the properties altogether. A good example is a theophylline verses caffeine. They differ by just a methyl group but one of them has a pharmaceutical use as a bronchodilator. There is no absolute predictability and no established correlation between the different substitutions on a core that they would all behave in the exact same way. The existence of these obstacles establishes that the contemporary knowledge in the art would prevent one of ordinary skill in the art from accepting any therapeutic regimen on its face.

How to make :- It is not easy to synthesize compounds. As stated in the preface to a recent treatise:

"Most non-chemists would probably be horrified if they were to learn how many attempted syntheses fail, and how inefficient research chemists are. The ratio of successful to unsuccessful chemical experiments in a normal research laboratory is far below unity, and synthetic research chemists, in the same way as most scientists, spend most of their time working out what went wrong, and why. Despite the many pitfalls lurking in organic synthesis, most organic chemistry textbooks and research articles do give the impression that organic reactions just proceed smoothly and that the total synthesis of complex natural products, for instance, is maybe a laborintensive but otherwise undemanding task. In fact, most syntheses of structurally complex natural products are the result of several years of hard work by a team of chemists, with almost every step requiring careful optimization. The final synthesis usually looks quite different from that originally planned, because of unexpected difficulties encountered in the initially chosen synthetic sequence. Only the seasoned practitioner who has experienced for himself the many failures and frustrations which the development (sometimes even the repetition) of a synthesis usually implies will be able to appraise such workChemists tend not to publish negative results, because these are, as opposed to positive results, never definite (and far too copious)

....." Dorwald F. A.

Side Reactions in Organic Synthesis, 2005, Wiley: VCH, Weinheim pg. IX of Preface.

4) The level of one of ordinary skill: The ordinary artisan is highly skilled.

- 5) The level of predictability in the art: It is noted that the pharmaceutical art is unpredictable, requiring each embodiment to be individually assessed for physiological activity. In re Fisher, 427 F. 2d 833, 166 USPQ 18(CCPA 1970) indicates that the more unpredictable an area is, the more specific enablement is necessary in order to satisfy the statue. The level of unpredictability is in the art is very high. The compounds which differ by a methyl group also show different properties, for e.g. theophylline and caffeine. One of them is a bronchodilator and they differ only by a methyl group.
- 6) The amount of direction provided by the inventor: The inventor provides very little direction in the instant specification. Examples of a limited scope of compounds have been made. Even though according to MPEP applicants do not have to enable each and every embodiment but atleast 50% should be enabled. In this case only about 2% has been enable.
- 7) The existence of working examples: The instant specification has a few examples as given above.
- 8) The quantity of experimentation needed to make or use the invention based on the content of the disclosure: Since there are few working examples, and the unpredictability in the art is very high, the amount of experimentation is very high and burdensome and undue.

Taking the above eight factors into consideration, it is not seen where the instant specification enables the ordinary artisan to make and/or use the instantly claimed invention.

Genetech Inc Vs Nova Nordisk 42 USPQ 2d 1001.

"A patent is not a hunting license. It is not a reward for search but compensation for its successful conclusion and patent protection is granted in return for an enabling disclosure of an invention, not for vague intimations of general ideas that may or may not be workable."

MPEP 2164.01(a) states, "A conclusion of lack of enablement means that, based on the evidence regarding each of the above factors, the specification, at the time the application was flied, would not have taught one skilled in the art how to make and/or use the full scope of the claimed invention without undue experimentation. In re Wright, 999 F.2d 1557,1562, 27 USPQ2d 1510, 1513 (Fed. Cir. 1993)." That conclusion is clearly justified here. Thus, undue

Conclusion

Claims 1-6 and 13 are rejected.

Claim 7 is objected to as containing non-elected subject matter.

experimentation will be required to practice Applicants' invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rita J. Desai whose telephone number is 571-272-0684. The examiner can normally be reached on Monday - Friday, flex time..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Janet Andres can be reached on 571-272-0867. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
